

COMMUNITY DAY

CONTAINERS ON AWS

WITH ECR, ECS, EC2 & FARGATE

Presented by: Youssef Mnani and Kris Fernando

COMMUNITY DAY

SPEAKERS

Youssef Mnani
CLOUD ENGINEER

Kris Fernando
SOLUTIONS ARCHITECT

COMMUNITY DAY

INTRODUCTION

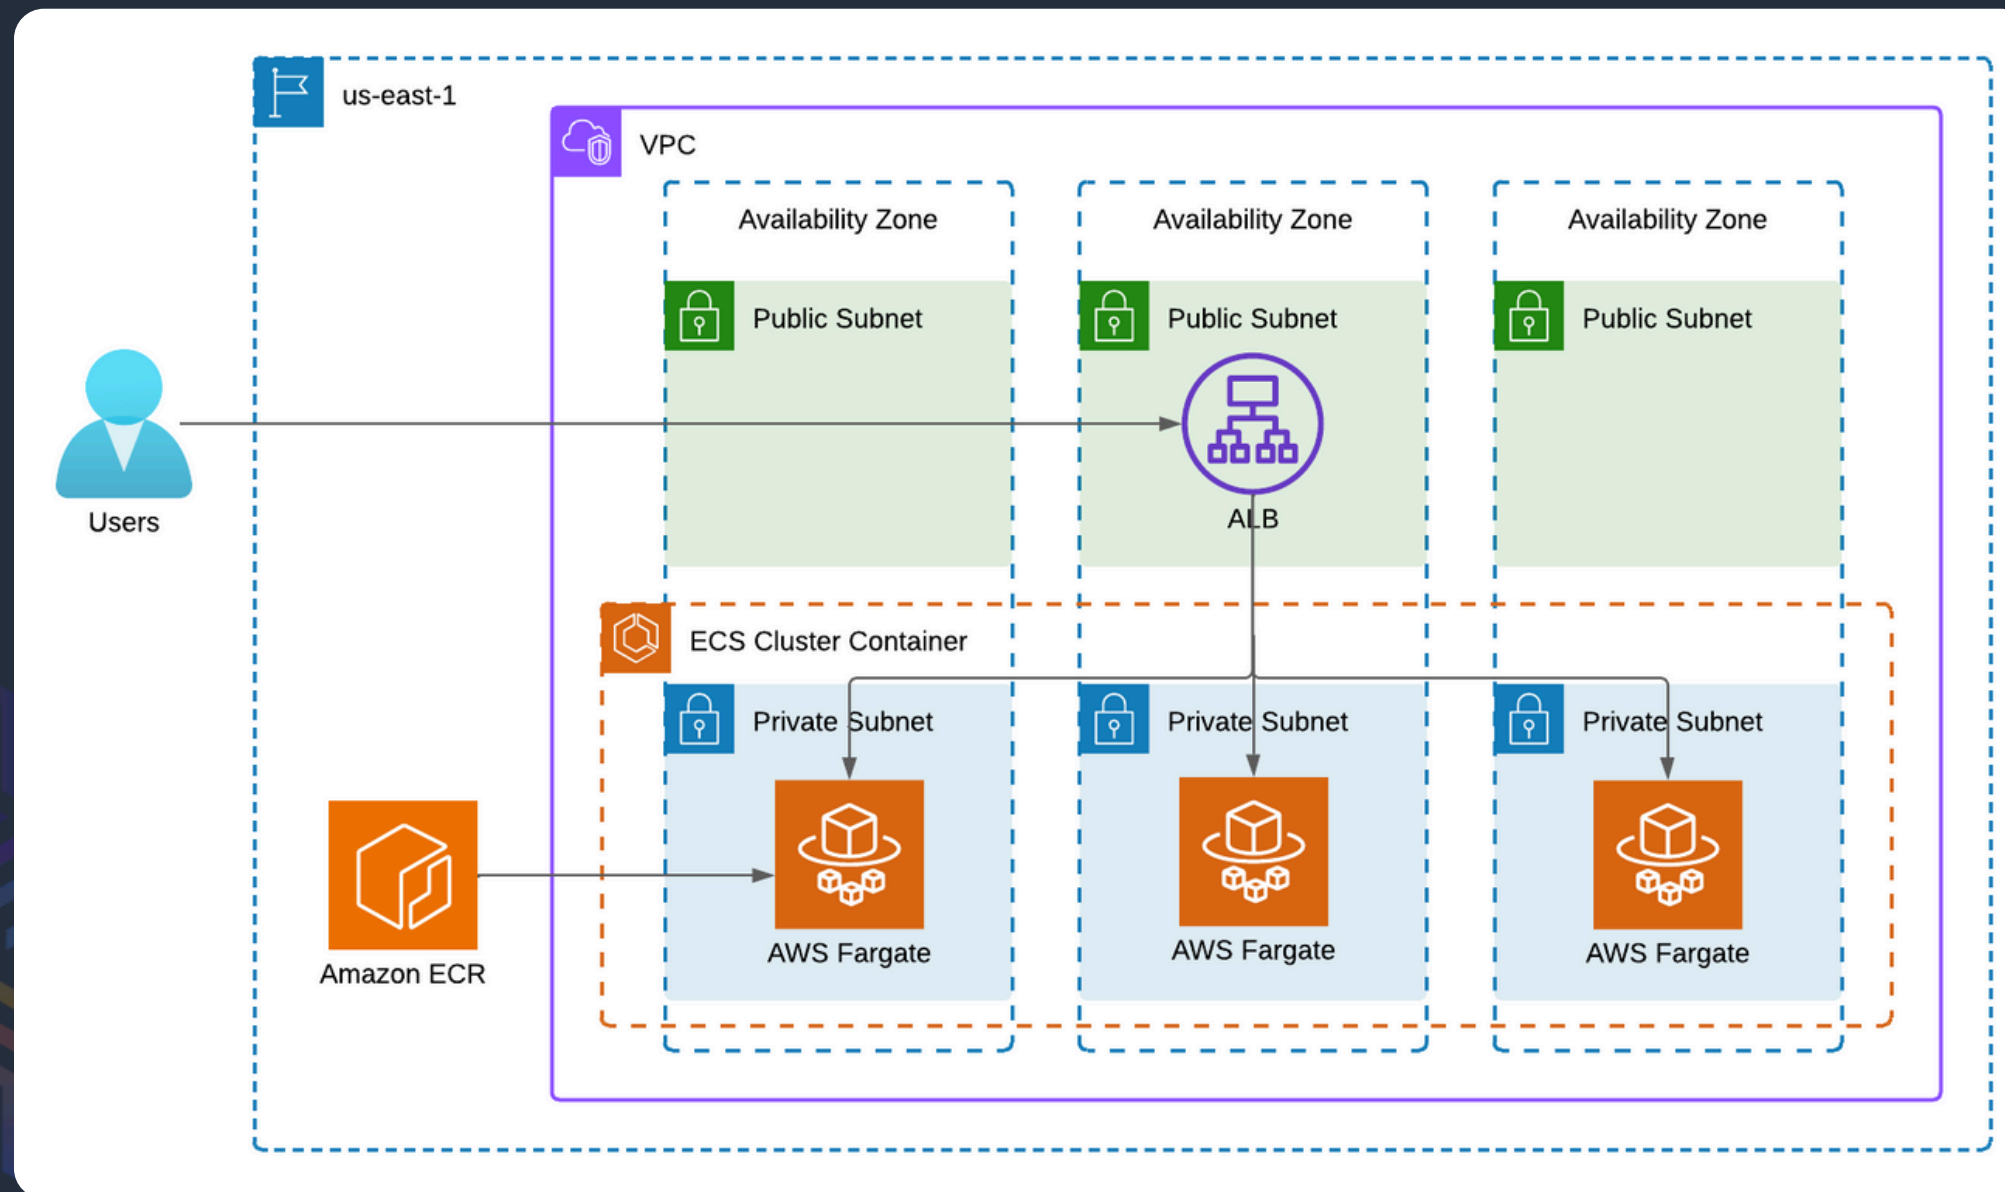

- Introduction to DevOps
- Why use containers?
- Overview of AWS container services
 - Elastic Container Registry
 - Elastic Container Service
 - Fargate
 - Elastic Compute Cloud

COMMUNITY DAY

ARCHITECTURE

Design:

- Region
- Elastic Container Registry
- Virtual Private Cloud
- Elastic Load Balancer
- ECS Cluster
- Task Definition
- ECS Service
- Fargate and/ or EC2

COMMUNITY DAY

DOCKER FILE

dockerfile X

```
1 FROM node:18-alpine
2 WORKDIR /app
3 COPY package*.json ./
4 RUN npm install
5 COPY . .
6 CMD ["npm", "start"]
7 EXPOSE 80
```

Docker File:

- Base Image
- Setup Working Directory
- Copy Application Dependencies
- Install Dependencies
- Copy Application Code
- Start Application
- Expose Port
- Container Image Blueprint

COMMUNITY DAY

ELASTIC CONTAINER REGISTRY

Private repositories (1)

	Repository name ▲	URI	Created at ▼	Tag immutability	Encryption type
<input type="radio"/>	aws-community-day/app	 [redacted].dkr.ecr.us-east-1.amazonaws.com/aws-community-day/app	30 March 2025, 10:49:57 (UTC-04)	Mutable	AES-256

Fully managed container registry service provided by AWS. It allows developers to store, manage, and deploy Docker container images. Essentially, it simplifies the process of working with containerized applications by providing a secure and scalable place to keep images.

COMMUNITY DAY

FARGATE

AWS Fargate is a serverless compute engine for containers that works with Amazon ECS. It removes the need to manage servers or clusters, allowing you to focus solely on designing and building applications. In essence, Fargate lets you run containers without worrying about the underlying infrastructure.

COMMUNITY DAY

ELASTIC COMPUTE CLOUD

Amazon Elastic Compute Cloud (EC2) provides resizable compute capacity in the cloud, essentially offering virtual servers. It allows users to rent virtual machines, or "instances," to run applications, giving them control over their computing resources. In short, EC2 provides on demand, scalable computing in the cloud.

COMMUNITY DAY

ELASTIC CONTAINER SERVICE

Clusters (1) [Info](#)

Last updated 30 March 2025 at 11:24 (UTC-4:00)

Create cluster

< 1 >

Cluster	Services	Tasks	Container instances
aws-community-day-cluster	0	No tasks running	0 EC2

Task definitions (1) [Info](#)

<input type="checkbox"/>	Service name	ARN	Status	Service type	Deployments and tasks	Task definition
<input type="checkbox"/>	aws-community-day-service	arn:aws:ecs:	Active	REPLICA	0/1 tasks running	aws-community-day-task:1

Fully managed container orchestration service that makes it easy to deploy, manage, and scale containerized applications. It eliminates the need to install and operate your own container orchestration software, allowing you to focus on building your applications.
